                                                                                                         of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid

(2) encoding a polypeptide whose expression is inhibited by the antisense

(3) an isolated

(4) an antisons is inhibited by the antisense

(5) contisense nucleic acid; (4) an antibody capable of specifically binding

(6) contisense nucleic acid; (4) an antibody capable of specifically binding

(7) identifying a gene polypeptide; (5) inhibiting cellular

(8) proluction the polypeptide; (6) inhibiting cellular

(9) proliferation, (7) identifying a compound that influences the activity of

(1) identifying a gene required for cellular proliferation; (8)

(1) identifying a gene required for cellular proliferation or the biological

(1) pathway in which a proliferation-required gene or its gene product or

(1) manufacturing an antibotic; (10) profiling a

(2) compound's activity; (11) a culture comprising strains in which the gene

(3) product is overexpressed or underexpressed; (12) determining the extent

(4) to which each of the strains is present in a compound that inhibits the

(5) proliferation of an organism. The antisense nucleic acids are useful for

(6) contiferation of an organism. The antisense nucleic acids required

(6) dentifying proteins or screening for homologous nucleic acids required

(6) contiferation in cells other than S. aureus, S. typhimurium,

(7) prokaryotic essential genes on the rhar S. aureus, S. typhimurium,

(8) continued for proliferation in cells other than S. aureus, S. typhimurium,

(8) continued for proliferation in cells other than S. aureus, S. typhimurium,

(9) prokaryotic essential genes of the target for the target for proliferation in cells other than S. aureus, S. typhimurium,

(9) prokaryotic essential genes of the target for the target for proliferation to solate the for the target for proliferation to solate for the target for proliferation to solate for the target for proliferation to solate for the target for the target for t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    21-MAR-2001; 2001US-00815242.

emoding a polypeptide whose expression is inhibited by the antisense uncleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense mucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway or a gene on which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an compound's activity; (11) a culture comprising strains in which the gene product is overskyressed or underexpressed; (12) determining the extent

                                                                                      to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI;

                                                                                                                                                                                                  the 513 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid conding a polypeptide whose expression is inhibited by the antisense concerning the vector; (3) an isolated concerning the vector; (3) an isolated concerning the vector; (3) an isolated content whose expression is inhibited by the concerning the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular contining the polypeptide; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway consideration; (7) identifying a compound that influences the activity of confideration of the proliferation, or that inhibits cellular proliferation; (8) cor agene on which the test compound that influences the activity of compound that inhibits ground that influences the activity of compound that inhibits ground that inhibits the gene product is overexpressed or underexpressed; (12) determining the extent compound that inhibits the gene product is overexpressed or underexpressed; (12) determining the extent confideration of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required confideration in cells other than S. aureus, S. typhimurium, confideration for the proliferation, but was obtained in other than S. alternation of the printed specification, but was obtained in

CC Nucleotide sequences AAZ37113-Z37126 are essential Haemophilus influenzae CC genes that have been identified by the methods of the invention. The CC invention relates to a method for locating essential regions of a portion CC of an organism's genome by: (1) in vitro mutagenising DNA having the CC sequence of the region with a transposon; (ii) identifying cells of the CC organism transformed with the mutagenised DNA of (i); and (iii) locating CC the region by detecting the absence of transposons in the region of the CC mutagenised cells containing the mutagenised DNA. The invention also CC relates to a method for isolating a compound that modulates the CC expression of a nucleic acid sequence operably linked to a gene promoter, CC cell growth or viability. The methods are used to detect genes that are essential for the growth and viability of organism. Such genes can be CC used e.g. as targets for anti-microbial therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                         response or sensitivity to toxins and antibiotics produced by P. Iuminescens. Cells transformed to express the genes are useful for recombinant production of the proteins, particularly toxins and antibacterials useful as insecticides, bactericides and fungicides. The genes, proteins, vectors containing the genes and Ab are also useful therapeutically (to treat microbial infection by bacteria or fungi that are sensitive to P. luminescens-encoded toxins or antibiotics) and as biopseticides. Other uses of the genes and the proteins are as virulence factors and for identifying targets of human diseases for which P. luminescens is a model (particularly plague and whooping cough). This sequence represents one of the isolated P. luminescens genes
                                                                                                                                                                                                      The invention relates to the isolation of genes and their encoded proteins from Photorhabdus luminescens. The isolated sequences are sources of probes and primers for detecting the genome of P. luminescens and related species; to study polymorphisms; for gene analysis and for detection/amplification of the genes. Antibodies (Ab) raised against the polypeptides encoded by the genes are used for detection/identification of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that carry a gene-containing vector are used to select compounds that carry a gene-containing vector are used to select compounds that modulate, regulate, induce or inhibit expression of the genes in plants, animals or microorganisms other than P. luminescens and are able to alter
                                                                                                                                                                                                                                                                                                                                                                                                                    Genomic sequence of Photorhabdus luminescens useful e.g. as therapeutic antimicrobials and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     detection; food; gene expression; plant; animal; microorganism; toxin; antibiotic; biopesticide; virulence factor; disease model; plague; whooping cough; gene; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 response or sensitivity to toxins and antibiotics produced by P. luminescens. Cells transformed to express the genes are useful for recombinant production of the proteins, particularly toxins and antibacterials useful as insecticides, bactericides and fungicides. The genes, proteins, vectors containing the genes and Ab are also useful therapeutically (to treat microbial infection by bacteria or fungi that are sensitive to P. luminescens-encoded toxins or antibiotics) and as biopesticides. Other uses of the genes and the proteins are as virulence factors and for identifying targets of human diseases for which P. luminescens is a model (particularly plague and whooping cough). This sequence represents one of the isolated P. luminescens genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 876 BP; 200 A; 177 C; 221
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             proteins from Photorhabdus luminescens. The isolated sequences are sources of probes and primers for detecting the genome of P. luminescens and related species; to study polymorphisms; for gene analysis and for detection/amplification of the genes. Antibodies (Ab) raised against the polypeptides encoded by the genes are used for detection/identification of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that carry a gene-containing vector are used to select compounds that modulate, regulate, induce or inhibit expression of the genes in plants, animals or microorganisms other than P. luminescens and are able to alter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Genomic sequence of Photorhabdus luminescens useful e.g. as therapeutic antimicrobials and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antibacterial; fungicide; insecticide; polymorphium; genetic analysis; detection; food; gene expression; plant; animal; microorganism; toxin; antibiotic; biopesticide; virulence factor; disease model; plague; whooping cough; gene; ds.

RESULT 3 US-09-43-681A-2282 ; Sequence 2282, Application US/09543681A ; Patent No. 6605709

밁

```
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING
TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 2709.1002-001
CURRENT APPLICATION NUMBER: US/09/543,681A
CURRENT FILING DATE: 2000-04-05
PRIOR APPLICATION NUMBER: US 60/128,706
PRIOR APPLICATION NUMBER: US 60/128,706
PRIOR FILING DATE: 1999-04-09
NUMBER OF SEQ ID NOS: 8344
SEQ ID NO 2282
LENCTH: 873
TYPE: DNA
ORGANISM: Proteus mirabilis
US-09-543-681A-2282
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GENERAL INFORMATION:
